## In the Claims

Please amend the claims as follows:

- 1. (currently amended) A thermosetting composite material, particularly for manufacturing sanitary articles and kitchen sinks, comprising a polymeric matrix that incorporates a filler material distributed in said matrix and comprised therein in a percentage from 60 to 85%, wherein said filler material is constituted by glass particles the preponderant fraction of which has a size distribution from 0.2 to 1.5 mm.
- 2. (original) The composite material according to claim 1, wherein said polymeric matrix is constituted by a solution of polymethyl methacrylate in methyl methacrylate.
- 3. (currently amended) The composite material according to claim [[1]] 21, wherein said filler material is comprised in a percentage from 60 to 85%.
- 4. (original) The composite material according to claim 1, wherein said polymeric matrix is introduced in a percentage from 40 to 15%.
- 5. (original) The composite material according to claim 1, wherein said polymeric matrix is constituted by a syrup of polymethyl methacrylate in methyl methacrylate, in which the polymethyl methacrylate percentage is from 25 to 30% by weight of the matrix.
- 6. (original) The composite material according to claim 1 comprising a catalyst in a percentage from 0.5 to 0.8%.
- 7. (original) The composite material according to claim 1, comprising, in said polymeric matrix, coloring fractions at a concentration from 1 to 5% with respect to the weight of the matrix.
- 8. (original) The composite material according to claim 1 wherein said filler is constituted by colored glass.
- 9. (original) The composite material according to claim 1, wherein said filler material has a coating layer made of organofunctional silane particles.

Application/Control Number: 10/784,981 Art Unit: 1724 November 16, 2007 Page 3

- 10. (previously presented) The composite material according to claim 5, wherein the preponderant fraction of said glass particles have a size from 0.4 to 0.9 mm.
- 11. (previously presented) The composite material according to claim 5, comprising from 1 to 2.5% by weight with respect to the syrup of a cross-linking agent.
- 12. (previously presented) The composite material according to claim 5, comprising from 0.1 to 0.2% by weight of said syrup of a release agent.
- 13. (previously presented) The composite material according to claim 5, comprising from 0.2 to 1% by weight of said syrup of an antisettling agent.
- 14. (previously presented) The composite material according to claim 5, comprising from 0.5 to 1% by weight of said syrup of organofunctional silanes.
- 15. (previously presented)) The composite material according to claim 3, wherein the filler material is comprised in a percentage from 70 to 80% by weight.

16-17 (canceled)

- 18 (currently amended) A thermosetting composite material, particularly for manufacturing sanitary articles and kitchen sinks, comprising a polymeric matrix that incorporates a filler material distributed in said matrix, wherein said filler material is comprised in a percentage from 60 to 85% and is constituted by glass particles the preponderant fraction of which has a size distribution from 0.2 to 1.5 mm, the glass particles being coated with organofunctional silane
- 19 (previously presented). A thermosetting composite material according to claim 18, wherein the glass particles are coated with mercaptosilaries.
- 20 (previously presented) A thermosetting composite material, particularly for manufacturing sanitary articles and kitchen sinks, comprising a polymeric matrix that incorporates a filler material distributed in said matrix, wherein said filler material is constituted by glass particles the preponderant fraction of which has a size distribution from 0.2 to 1.5 mm, wherein said polymeric matrix is constituted by a syrup of polymethyl methacrylate in methyl methacrylate, in which the polymethyl methacrylate percentage is from more than 25 to 30% by weight of the matrix.
- 21. (new) A thermosetting composite material, particularly for manufacturing sanitary articles and kitchen sinks, comprising a polymeric matrix that incorporates a

filler material distributed in said matrix, wherein said filler material is constituted by glass particles the preponderant fraction of which has a size distribution from 0.2 to 1.5 mm and said polymeric matrix is introduced in a percentage from 40 to 15%.

22. (new) The composite material according to claim 21, wherein said polymeric matrix is constituted by a syrup of polymethyl methacrylate in methyl methacrylate, in which the polymethyl methacrylate percentage is from 25 to 30% by weight of the matrix.
